## **How Can Offices Combat Viruses?**

### **Clean Science Solutions Completes 18 Month Field Study Using Technology To Purify Interior Environments—Air and Surfaces**

**New York, NY**, April 7, 2020 – Clean Science Solutions, a New York City-based real estate proptech firm that specializes in commercial solutions to purify air and sanitize surfaces, has completed an 18 month field study demonstrating that the technology effectively sanitizes air and surfaces from bacteria, viruses, mold, VOCs, smoke and odors. The timing for such technology is now more important than ever as COVID-19, also known as the novel Coronavirus, has reached pandemic status in the United States.

Clean Science Solutions partnered with a leading New York City-based real estate development and investment firm who owns and manages over 6.5 million SF of property in New York City, to run the 18 month field study to test Clean Science Solution's PHI-Cell® units within a 50 story, 1.2 million square foot building. The firm

found the results so compelling— lowering VOCs in the air at a rate significantly faster than natural (or HVAC-system-induced) dissipation.

“I’ve always felt like the next revolution in this world is environmental, and now we are looking at an indoor environmental revolution,” said Thomas M. Misisco, the CEO of Clean Science Solutions. “Some commercial properties have contaminated HVAC systems and now, seeing the effects that COVID-19 has had on our community, we expect a rising demand for clean, purified air in both the workplace and residential properties. We offer a solution for building owners to provide their tenants with a cleaner working environment to offer their employees, clients and customers.”

If not properly maintained, heating ventilation and air conditioning systems (HVAC) are prone to mold growth and harboring viruses and bacteria. Clean Science Solutions offers building owners and tenants a peace of mind trusting that the air and surfaces in their buildings are continuously and actively cleansed to reduce toxins above and beyond the typical HVAC maintenance schedule. The Advanced Oxidation Technology (AOT) works on a molecular level to reduce toxic compounds in the air and on surfaces. The system supplements your existing filter and is 99% effective in reducing viruses and bacteria like MRSA, Swine Flu, Norovirus and more. It also reduces VOCs up to 99%, odors and mold up to 98% and smoke up to 70%.

Clean Science is a licensed distributor and reseller of patented Photohydroionization® PHI-Cell® or REME Halo® patent pending technologies manufactured by RGF Environmental Group, Inc, offers air and surface purification units which leverage AOT to kill bacteria, viruses, mold, and drastically reduce VOCs and odors within interior environments. Over the last 15 years, this technology has been installed to serve customers across several industries including healthcare, food processing, military, government, marine, hospitality, and residential and commercial real estate.

COVID-19 is similar to other viruses that RGF has previously tested. This has given reason to believe that RGF technologies could be effective in reduction of COVID-19, however, no definitive claims can be made at this time. COVID-10 is a member of the

RNA Coronavirus subfamily which have validated test results showing a 99+% reduction in similar viruses.

Clean Science products consume very low amounts of energy, about 12 watts, which is about the same as the lightbulb in a refrigerator, and test safe for Ozone levels, emitting little to none. Clean Science Solutions helps landlords bring peace of mind to themselves and their tenants while also helping them reach their target IAQ standards to pass sample tests for LEED Certification.

**About Clean Science Solutions:**

Clean Science offers a range of commercial solutions to serve your pure space needs, from free standing units, to those installed within your HVAC system, we can accommodate single offices, to entire floors, to an entire skyscraper. Our engineers will assess your space, fan schedule and more to ensure you have the products you need to get the clean air and pure surface results you want. Clean Science Solutions is a licensed distributor and reseller of products manufactured by RGF Environmental Group, Inc. Clean Science Solutions is based in New York City was Co-founded by Thomas Misisco and Billy Ward in 2018.
