

Fisher Brothers

June 3, 2021

To Whom it May Concern,

I am pleased to be writing this letter in regards to Clean Science Solutions (CSS)/ Thomas Misisco CEO and Billy Ward, CGO and PHI technology. Well over four years ago, Fisher Brothers proactively started exploring options to provide aggressive methods to sanitize air & surfaces within our entire Manhattan office portfolio, in order to kill the microbes at the source before coming in contact with them. There were numerous companies that approached us claiming to have the best most cost effective solution. After an extensive 18-month due diligence process and exhaustive testing of various products and technologies , we decided to utilize Clean Science Solutions/PHI technology throughout our 6+ million square foot New York City portfolio of Class-A office buildings.

My team and I are extremely pleased with our decision as the CSS product/PHI technology is working exactly as planned, the cost to purchase and install/implement this system was inconsequential to our operating costs, and most importantly, it has enabled our tenants to return to work in a much safer and expeditious manner. I highly recommend Clean Science Solution/PHI Technology as this is the safest, most efficient and cost effective way to purify, sanitize any indoor space, air and surfaces on the market.

Sincerely,

Kenneth Fisher

Principal/Senior Managing Partner
